Cyber Security MSc graduate aiming for offensive security and penetration testing in the UK. Hands-on application and API security at Hover Fest, university work across Windows internals, IoT and ICS, and 2nd place at the Hack the Isles finals.

EDUCATION

University of Birmingham **Sep. 2025 – Sep. 2026**
Master of Science, Cyber Security *Birmingham, UK*

- Relevant module: Designing and Managing Secure Systems (ISO 27001, IT General Controls, SOC 2, COBIT), including review of SOC 2 reports and supplier security questionnaires.

Technical University of Košice (TUKE) **Sep. 2022 – Sep. 2025**
Bachelor of Science, Computer Science *Košice, Slovakia*

EXPERIENCE

Hover Fest **Noida, India (Remote)**
Associate Security Engineer (Part Time) *Sep. 2025 – Sep. 2026*

- Reviewed code and tested APIs against the OWASP Top 10 and API Security Top 10 using Burp Suite and Postman, finding and helping fix 12 vulnerabilities, 3 of them high or critical.
- Triaged Semgrep, Dependabot and OWASP ZAP scan results and built a vulnerability tracker that cut open critical and high findings from 24 to 7 in about four months.
- Wrote and tuned 8 detection rules in Splunk and Microsoft Sentinel for login abuse, OTP flooding and abnormal API activity, identifying 9 confirmed or strongly suspected attacks.
- Supported 5 incident investigations using endpoint and network logs, including a credential-stuffing wave contained in about 2.5 hours, and wrote the timelines and root-cause reports.
- Encrypted 9 sensitive customer fields across 5 tables (AES-256 at rest, TLS in transit, AWS KMS keys with 12-month rotation), supporting DPDP Act and PCI DSS requirements.

Freelance / Contract **Bratislava, Slovakia**
Field Agent, IT Support *Feb. 2025 – Sep. 2025*

- Deployed and configured laptops for employees at client companies, ensuring secure integration with corporate networks.
- Installed OS updates, configured security settings, and validated connectivity with corporate systems.
- Created user accounts and set access permissions only against issued and approved tickets, escalating issues beyond scope to client IT teams.

PROJECTS

Microsoft Code Signing and Windows Internals **Jun. 2026 – Sep. 2026**
MSc Final Project *University of Birmingham*

- Investigated the security of Microsoft code signing and Windows internals, using WinPmem to gain direct physical memory access without a signed driver of my own.
- Built a proof-of-concept exploiting physical memory reads and aliasing to extract live process data, working with memory aliasing to locate specific memory structures.
- Used the technique to build a functioning tool that read player position data from a running game process in real time.
- Extended the work to direct physical memory writes, which reliably crashed the target Windows machine after a small number of attempts.

Security Evaluation of EZVIZ C6N IoT Camera **Mar. 2026**
MSc Group Project (Group 3) *University of Birmingham*

- Penetration tested a consumer IoT camera's network security in a controlled lab as part of a five person team, from reconnaissance through to exploitation attempts.
- Authored the group assessment report documenting findings, severity ratings, and remediation guidance within defined scope constraints.

Industrial Control System Security Testing **Sep. 2025 – Oct. 2025**
MSc, Independent Work *University of Birmingham*

- Tested the security of a simulated industrial control system, using Snap7 to read and manipulate PLC values.
- Observed the effect of manipulated PLC values on a Factory I/O digital twin of the physical process.

SecurePass Analyzer **Jan. 2025**

- Built a Streamlit password auditing tool integrating the HaveIBeenPwned API for breach detection, reaching 95% accuracy.
- Implemented entropy checks and policy compliance scoring, reducing weak passwords by 40%.

CERTIFICATIONS, SKILLS & INTERESTS

Achievements: 2nd place, Hack the Isles finals, CyberSpark, Belfast, Feb. 2026 (CTF problem solving and threat hunting).
Certifications & Training: Working towards CompTIA Security+, EC-Council CEH and ISACA CISA; completed the full Cisco CCNA curriculum; courses in ethical hacking (ZSecurity), Google Cybersecurity, AWS networking and bug bounty.
Penetration Testing & Offensive: Nmap; Burp Suite; Metasploit; WinPmem; Unicorn; Kali Linux; SQL injection; Wi-Fi security; OWASP Top 10; VMware; VirtualBox.
Application & API Security: Secure code review; API testing (Burp Suite, Postman, OWASP ZAP); Semgrep; Dependabot; OWASP API Security Top 10; vulnerability triage and tracking.
Security Operations: SIEM (Splunk SPL, Microsoft Sentinel KQL, ELK); detection rule writing and tuning; endpoint and network log analysis; incident response and reporting.
ICS/OT & Programming: Snap7, PLC value manipulation, Factory I/O digital twins; C#, Python, Java, JavaScript, PowerShell, Bash, SQL (PostgreSQL, MySQL).
Cloud, Governance & Systems: AWS and Azure (VM deployment, AWS KMS), Kubernetes, Docker; ISO 27001, NIST CSF, NIST SP 800-30, PCI DSS, DPDP Act; Windows and Linux administration; Git. Languages: English (C1), Hindi/Urdu (C1), Kannada (B1).
